

DINO RXT 220/280/72/92 BEARING AND LOCKING PIN CHECK

Dear DINO partner

We have received information that one DINO 280RXT has had a bearing failure apparently due to repair error in the field. This failure resulted in locking pin damage which caused the pivot pin to extrude. Due to the severity of the issue, we now request an immediate inspection of all locking pins and check that all relevant bearings are intact on RXT machines. Visual inspection conducted by the owner of the machine or the distributor is possible and no dismantling is necessary. Below you will find pictures of damaged and undamaged bearings as visual aid. After the equipment has been checked according to the instructions below, please notify techsupport@dinolift.com of all findings concerning this bulletin with reference to the serial number of the machine. If damaged bearing or deformed locking pin is discovered the use of machine must be discontinued immediately. If all bearings are intact the use of the equipment can be continued normally following the service intervals.

Serial numbers to be checked;

RXT 280/92 #80002-80086

RXT 220/72 #45001-45009

If damaged locking pins or bearings are found, please add pictures of damaged bearings and locking pins to the notification towards techsupport@dinolift.com
