

We are ready for APEX

We are happy to announce that we are coming to the APEX! This year APEX will be in MECC Forum in Maastricht, Netherlands June 6.8.2023. APEX showcases the latest aerial platforms, compact construction equipment, and rental IT. Dinolift will display an all-electric, battery-powered 280 RXTE and MyDINO telematics solution. Vehicle-mounted DINO 230VTH and trailer-mounted lift 160XTB II will also be presented.

All electric DINO® Lightweight 4x4 – Meet DINO 280 RXTE

The DINO RXTE supports the European green deal target of reducing carbon dioxide emissions. DINO RXTE's working height is 28 meters, outreach is 14 meters, and working load is 230 kilos equipped with an AGM or Li-Ion battery pack. Being an all-electric MEWP, it is possible to take the lift to emission-restricted zones inside cities as well as indoors. Operator comfort is supreme as there are no vibrations in the basket. One of the design principles was that there was no loss on drive or boom operation speeds over the diesel version. The RXTE has multiple lift functions available to be used simultaneously – operating the outriggers simultaneously with the drive is also possible. The electric motor has a continuous power rating of 15kW while the peak power is 20kW.

The diesel model will remain in the range alongside the fully electric model.

MyDINO – stay on top of your fleet

MyDINO telematics provides an insight into the DINO MEWP via the mobile application or the desktop version. It is designed for the end customer/operator of the lift, fleet management, and technical support at Dinolift, distributor, or rental company technical support. Telematics service can reduce on-site maintenance visits significantly. With MyDINO, it is possible to track location, set geofencing and efficiently monitor transfers between rentals. In addition, there are added channels that are monitored so it is possible to monitor load cases/overloads and outriggers being sufficiently set by the operator. Seeing the actual status of the machine helps all technical support people and serves the customer also remotely. CO2 emissions can also be estimated and reported through engine rpm and usage. MyDINO is a standard feature on all new DINO's manufactured 2023. MyDINO is also possible to retrofit to older DINO models.
